Session 2025-26
Progress 1 Seminar

Group ID- GB 2
SmartDairy: Dairy Management System

Name of the Students
1. Amit P. Taksande(215)
2. Atharva M. Kurhe (218)
3. Gaurav N. Chafle (219)
4. Harsh A. Bhongade (220)
5. Sumit M. Karanjekar (233)

Under the Guidance of
Mr. Nitesh Ghodichor,
Assistant Professor,
Department of Computer Technology

Introduction

- Dairy is an essential part of every household.
- Farmers face challenges in selling milk and renting dairy equipment.
- Customers lack a digital platform to buy fresh milk and dairy products.
- Our project provides a digital solution that connects farmers, customers, and administrators.

Problem Statement

- Lack of direct connection between farmers and customers.
- Farmers struggle to rent dairy machinery.
- Customers depend on middlemen for milk supply.
- Need for a platform that ensures fair pricing, transparency, and convenience.

Objectives of the Project

- To develop a platform for:
  - Buying dairy products directly by customers.
  - Renting machinery by farmers.
  - Managing product inventory digitally.
- To empower farmers with additional income sources.
- To provide easy access to fresh dairy products for customers.

Scope of the Project

- Customer Module: Buy milk, ghee, butter, and other dairy products.
- Farmer Module: Add machinery for rent, manage listings.
- Admin Module: Approve products, manage users, handle disputes.
- Future Features: Payment integration, delivery tracking, farmer support system.

Work Completed

So far, we have successfully completed:

- ✅ Requirement gathering from farmers & customers.
- ✅ Literature survey and existing system analysis.
- ✅ Problem definition & objectives finalized.
- ✅ Drafted system architecture.
- ✅ User flow
- ✅ Basic wireframes for login & product module.

System Architecture

- Farmers → Add dairy machinery/products → System database.
- Customers → Browse products → Place order/rent request.
- Admin → Approves & manages transactions.

Key Features

Farmer Management

Maintain digital records of all farmers with secure, centralized access to information.

Animal Tracking

Monitor livestock information, health records, and milk production metrics.

Milk Collection

Automate daily milk collection records with accurate measurements and calculations.

Billing Automation

Generate accurate billing reports over customizable date ranges with transparency.

Inventory Management

Track dairy products like ghee, paneer, butter, and curd for efficient stock control.

Role-Based Access

Control system access with permissions tailored to administrators, staff, and farmers.

Why Choose Smart Dairy?

Our system is specifically designed for small to medium-scale dairy farms, offering an affordable solution without the complexity of large ERP systems

Challenges Faced

- Requirement gathering for both farmer & customer perspectives.
- Designing a scalable architecture for multiple roles.
- Drafting database structure for product & rental system.
- Aligning features with real-world feasibility.

Next Steps

- Develop full frontend UI.
- Backend development (APIs, database connectivity).
- Integration of payment system.
- Testing & debugging.
- Final deployment and project documentation.
